MODEL 110

1. ACCUFIT™

We all know proper fit of a rifle is key to repeatable accuracy. The Savage AccuFit system allows for easy adjustment to length of pull and comb riser height. Five different comb risers allow you to set the perfect height for your size, optic height and shooting preference. Four stock inserts ensure the proper length of pull so the firearm truly fits you.

NOTE: AccuTrigger™ is shown red for emphasis. Actual color is silver. For more information, see video at: savagearms.com

2. ACCUTRIGGER™

Savage's AccuTrigger™ is the standard by which all factory triggers are judged. The system is easily adjustable, offers a light, clean pull with no creep, and prevents the firearm from discharging if jarred or dropped. Shooters can set the trigger pull to their preferences without having to pay a gunsmith. The AccuTrigger cannot accidentally discharge during normal use. While the trigger is being pulled, the integrated AccuRelease is intentionally depressed, which unblocks the sear and allows the rifle to fire.

3. FLOATING BOLT HEAD

Savage's floating bolt head adjusts itself for a perfect fit. By moving just a few thousandths of an inch, the head aligns with the bolt face, cartridge, and chamber.

SPECIFICATIONS SUBJECT TO CHANGE WITHOUT NOTICE.

4. ACCUSTOCK™ BEDDING

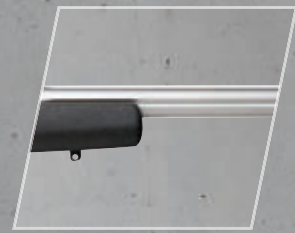

When a cartridge fires, harmonic waves travel the length of the barrel. This movement affects how the bullet travels. Repeatable accuracy requires a firmly bedded action. The Savage AccuStock embeds a rigid rail system in the stock throughout the forend. Rather than connecting the action to the stock with one or two screws, the AccuStock engages the action along its entire length.

5. HEADSPACE CONTROL

At Savage, we set headspace by carefully threading barrels into place with their matched actions and bolts. This hand-fit, zero-tolerance process results in a perfectly matched set that is then locked in with a barrel locknut.

6. PRECISION BUTTON RIFLED BARRELS

Accurate barrels require specialized machinery and experienced operators, Savage proudly employs both. Savage's centerfire barrels—from the Team Savage competitor's F Class rifle to the one going on your kid's first deer rifle – are checked and, if needed, hand-straightened by the same skilled craftsman.

RENEGAUGE™

A SEMI-AUTO BUILT FOR RENEGADES

ADJUSTABLE LENGTH OF PULL AND COMB HEIGHT

Allow for a customized fit that enhances accuracy and comfort for each shooter. Included with each package are three recoil pads and three comb heights.

A shim kit is included to further adjust drop and cast for minute adjustments for each shooter.

OVERSIZED CONTROLS

The charging handle and bolt release are larger than many factory shotguns for increased ease of use, particularly with gloves.

STOCK ROD BUFFER

The stock rod buffer is designed to reduce felt recoil and extend the life of the action bar assembly. *(Patent pending)*

COMPETITION-READY, EASY LOADING MAGAZINE PORT

The beveled loading port, angled trigger housing, receiver, and elevator are designed for easy and rapid loading of cartridges.

SPECIFICATIONS SUBJECT TO CHANGE WITHOUT NOTICE.

D.R.I.V.

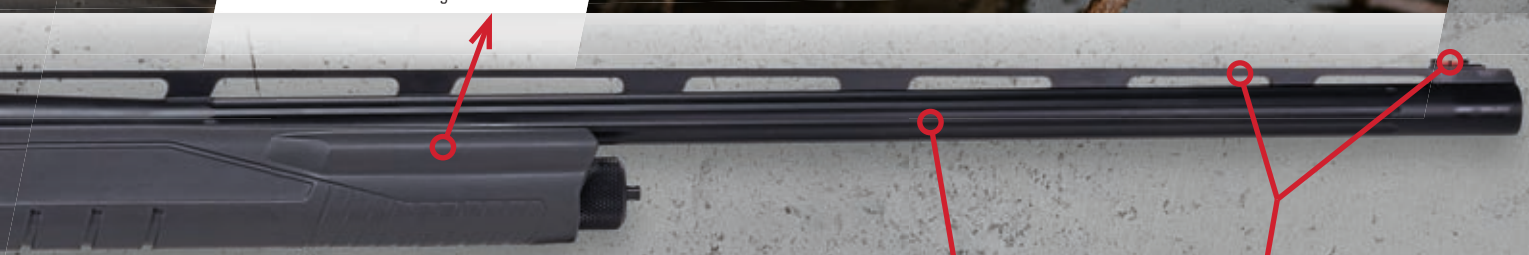

WHITE ARROW - Projectile exiting the firearm.
RED ARROW - Gas needed to cycle bolt carrier.
BLUE ARROW - Excess gas emitted.

D.R.I.V. GAS SYSTEM DUAL REGULATING INLINE VALVE GAS SYSTEM

The first semi-automatic gas operation shotgun manufactured by Savage Arms. The patented self-regulating gas system allows high power and low power loads to cycle with the same consistency and reliability. Savage's dual-valve gas system is designed to emit excess gas, thereby maintaining optimal bolt carrier velocity across various loads.

Reliable operation from 3" Magnums down to low recoil 2 3/4" cartridges.

VENTILATED RIB WITH RED FIBEROPTIC

ONE-PIECE LIGHTWEIGHT BOLT CARRIER

The action bar assembly, including the pusher sleeve, is laser welded to the carrier for increased strength and ease of assembly and disassembly. These components are then chrome plated for enhanced functionality and ease of cleaning.

BLACK NITRIDE

Provides excellent corrosion-resistance and surface hardness.

Full-length fluting on the barrel provides 9% weight reduction, improves balance, and swing.
